

GERONIMO.AI

Profit from Data

Machine Learning Engineering Internship

Will you be our new brain?

Geronimo.AI is founded in November 2018 by four former students of the TU Delft and aims to apply Artificial Intelligence (AI) in an accessible way to companies and government. We see an ocean of opportunities where self-learning algorithms can solve everyday challenges and create value for the world, giving people more time to be human. Currently we combine running projects with developing two products: detecting crops using satellite imagery and predicting the quality of provincial roads.

THE POSITION

THE JOB (3-6 months full-time, starting September 1st, 2020)

We develop algorithms in the realms of Geospatial Machine Learning, concerning geographical data, computer vision and Natural Language Processing (NLP). You will work together with experienced Machine Learning Engineers, join our company and technical meetings and get involved in contact with the client.

YOU ARE

- A real engineer and educated in Mathematics
- Passionate about and preferably experienced in machine learning
- Independent in your way of working
- A hero in Python (or equivalent language)

WE OFFER

- Young team, big impact, exciting start-up life
- Integration with our experienced machine learning team
- Access to high-end computing hardware
- Office in Delft with a stunning view and incredible lunches
- Joy in- and outside of the office
